

Sheheryar Khan

Software Engineer

055-9691496

ranasheheryar936@gmail.com

Eastern Province, Saudi Arabia

Frontend developer with hands-on experience in building responsive websites and working on UI/UX-focused web applications. I've worked in both small studio environments and SaaS-based companies, where I helped turn Figma designs into clean, functional interfaces using HTML, CSS, and JavaScript. I'm comfortable improving layouts, fixing UI issues, and making sure designs look consistent across different devices.

Along with frontend work, I also have some experience in business development, where I supported lead generation, client communication, and basic research to understand client needs. This helps me better understand the user and business side while working on products. I'm a quick learner, easy to work with, and comfortable collaborating with designers, developers, and teams in fast-paced environments.
